Submission 1: Data Gathering and
User Analysis

Student name:

Nguyen Khang Huynh - 33326460

Eric Blyth - 32529082

Jaeyun Ree- 30324181

Dohyeong Kim - 32445229

Table of Contents

1. Questionnaire and Data Analysis

- 1.1. Questionnaire with 15 questions
- 1.2. Questionnaire Response Analysis
 - 1.2.1. Decisions of creating questionnaire distribution and participant selection methodology.
 - 1.2.2. Analyse the data collected from each question.
- 1.3. Additional research

2. Personas and User Stories

- 2.1 User Personas
 - 2.1.1 Khang's Personas
 - 2.1.1.1. How the Persona was developed
 - 2.1.2. Eric's Personas
 - 2.1.2.1. How the Persona was developed
 - 2.1.3. Jaeyun's Personas
 - 2.1.3.1. How the Persona was developed
 - 2.1.4. Dohyeong's Personas
 - 2.1.4.1. How the Persona was developed
- 2.2. User Stories
 - 2.2.1. Khang's User Stories
 - 2.2.2. Eric's User Stories
 - 2.2.3. Jaeyun's User Stories
 - 2.2.4. Dohyeong's User Stories
- 2.3. New Functional User Requirements
 - 2.3.1. Khang's User Requirements
 - 2.3.2. Eric's User Requirements
 - 2.3.3. Jaeyun's User Requirements
 - 2.3.4. Dohyeong's User Requirements

1. Questionnaire and Data Analysis

1.1. Questionnaire with 15 questions

Question 1:

What is your age range?

- 18 - 24
- 25 - 34
- 35 - 44
- 45 - 54
- 55 - 64
- 65+

Question 2:

What is your gender?

- Male
- Female
- Non-binary
- Prefer not to say
- Other... [Please specify]

Question 3:

How many family members are in your household, including yourself?/

Non-compulsory

- 1
- 2
- 3
- 4
- 5
- More than 5

Question 4:

Do you have any disabilities that affect your ability to use a mobile app? (Select all that apply)

- Low vision
- Colour blindness
- Hearing loss
- Dyslexia
- None
- Other... [Please specify]

Question 5:

Have you ever taken online classes or courses before, and if so, how often, on average?

- Yes, very often, multiple times a week
- Yes, frequently, once a week
- Yes, occasionally, less than once a week, more than once a month
- Yes, rarely, once a month or less
- No

Question 6:

When using mobile applications, which of the following do you value the most? (Select all that apply)

- Ease of use
- Speed and performance
- Detailed contents
- Personalisation/Customisation
- Other... [Please specify]

Question 7:

When you learn something new online, which of the following is your preferred method of learning?

- Live-streamed classes
- Prerecorded classes
- Written guides

Question 8:

Which of the following would be your ideal length for online classes? /

Non-compulsory

- Less than 10 minutes
- 10 - 20 minutes
- 20 - 30 minutes
- 30 - 45 minutes
- 45 minutes - 1 hour
- More than 1 hour

Question 9:

How often do you use apps that provide personalised content or recommendations, on average?

- One or more times a day
- Once a week
- Once a month or less
- Never
- Not sure

Question 10:

How much experience do you have with cooking and/or baking?

- Very experienced, can experiment and create recipes independently
- Experienced can create dishes with minimal guidance
- Some experience, can follow recipes easily
- Little experience, have trouble following recipes
- No experience at all, have never cooked or baked before

Question 11:

How many hours per week are you willing to spend on cooking?

- Less than 1 hour
- 1 - 2 hours
- 2 - 3 hours
- 3 - 4 hours
- 4 - 5 hours
- More than 5 hours

Question 12:

What is your main goal when you take cooking classes? (Select all that apply)

- Improve cooking skills
- Save money on food
- Learn to cook healthy foods
- Learn to cook new/interesting dishes
- Cook special dishes, i.e. vegetarian/vegan, adhering to specific allergies or religious restrictions
- Other... [Please specify]

Question 13:

If you have any experiences learning new recipes, what challenges do you usually face? (Select all that apply)

- Ingredients are difficult to find
- Ingredients are too expensive
- Steps are too complicated to follow
- Recipes are too time-consuming to complete
- Lack of feedback or guidance
- Recipes lack suitable alternatives for dietary requirements
- Other... [Please specify]

Question 14:

What types of cuisine or dishes are you most interested in learning to cook?

(Select all that apply)

- Baked goods
- Western
- Asian
- Vegetarian/Vegan
- Desserts
- Other... [Please specify]

Question 15:

Do you have any dietary preferences or restrictions? / Non-compulsory

- [Short-answer text]

1.2. Questionnaire Response Analysis

1.2.1. Decisions of creating questionnaire distribution and participant selection methodology.

A non-probability sampling strategy was employed to distribute the questionnaire, with 28 participants selected based on predetermined criteria and availability. **Jaeyun** targeted non-students, including parents, family, and acquaintances who work in Australia. **Eric** used a combination of haphazard convenience sampling, Reddit posts, and responses from non-student acquaintances. **Dohyeong** selected nine friends aged 18–34 who were not enrolled in university. **Khang** used purposive sampling, sharing the survey with his sister's friends and coworkers from diverse backgrounds. While this approach ensured relevance to the target group, this strategy restricts generalisability in contrast to probability sampling.

1.2.2. Analyse the data collected from each question.

Question 1:

What is your age range?

Q1 identifies participants' age groups, a key demographic for audience targeting. The data shows most respondents (14 of 28) are aged 18–24, followed by 8 in the 25–34 range, with fewer aged 35+. This skew likely reflects the small sample size and non-probability sampling method.

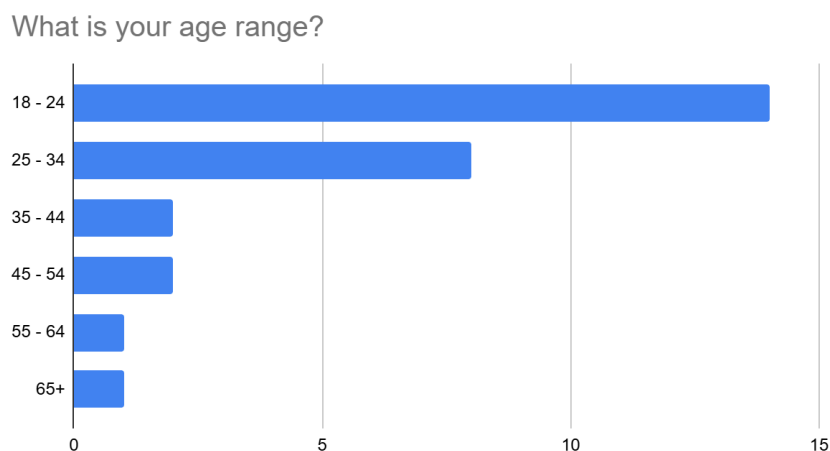

Figure 1: Graph of question 1

Question 2:
What is your gender?

Q2 identifies gender distribution among participants to inform audience targeting. The data shows a balanced number of male and female respondents. However, cross-analysis with **Q1** reveals most males are aged 18–24, while females are primarily 25 and older.

Question 3:
How many family members are in your household, including yourself?

Q3 is developed to find out the number of family members in a household, therefore providing an insight about the desirable portion of a dish and the amount of ingredients needed in general. It appears that 18 of participants have 4 or more in their family and 9 people have 3 or less. This indicates that the majority of participants are likely to cook dishes in a big portion, which can affect cooking time, budget and therefore the cooking classes they want.

Question 4:
Do you have any disabilities that affect your ability to use a mobile app?

Q4 aimed to identify users with disabilities affecting app use, guiding inclusive design. Most reported no disabilities, though some noted low vision and dyslexia which indicates the need for features like scalable text and simplified instructions. While multiple selections were allowed, the dataset is biased toward non-disabled users, limiting insights into diverse accessibility needs. Future research should include more participants with disabilities to better support inclusive design.

Question 5:
Have you ever taken online classes or courses before, and if so, how often, on average?

Q5 explored participants' familiarity with online classes. According to the data, approximately 43% of participants take online classes very often, while around 11% do so frequently, showing a strong level of comfort with digital learning among most users. However, a significant 35.7% reported never using online classes, highlighting a major group of potential users who may require additional guidance or onboarding. This emphasises the importance of designing the app with both experienced and first-time users in mind, ensuring accessibility and ease of use for all.

Familiarity of Online Class

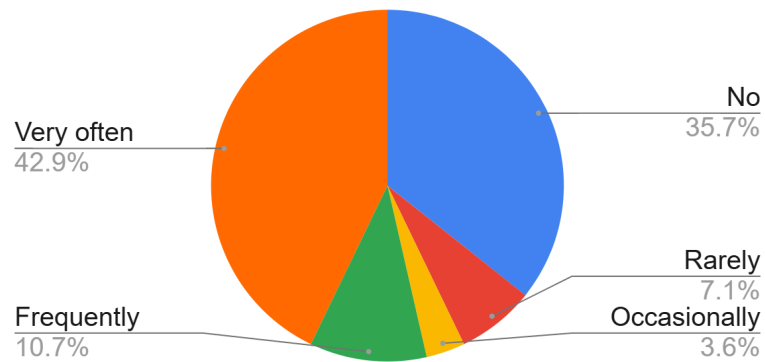

Figure 2: Graph of question 5

Question 6:

When using mobile applications, which of the following do you value the most?

Q6 identified key user priorities when using mobile apps. The most valued features were ease of use and speed/performance, while personalisation/customisation appeared less frequently. Notably, 25 out of 28 participants prioritised ease of use, regardless of age. These insights suggest that users prefer apps that are simple, responsive, and easy to navigate. Our team will focus on a straightforward design to ensure all users can easily access key features without confusion.

Key Value of Application

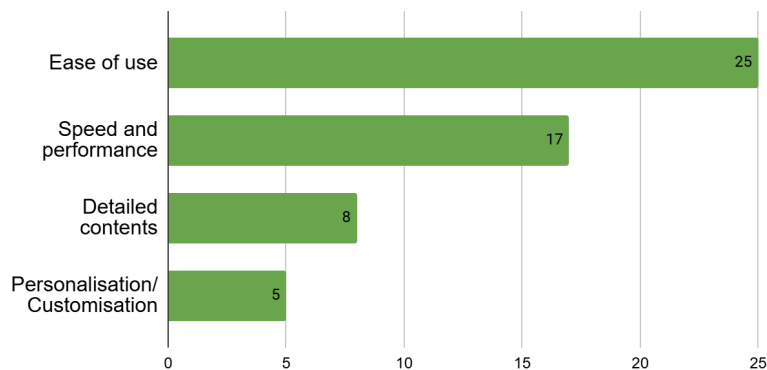

Figure 3: Graph of question 6

Question 7:

When you learn something new online, which of the following is your preferred method of learning?

This cross-analysis compares users' preferred learning methods (**Q7**) with the app features they value most (**Q6**). Of 54 total responses, prerecorded classes were the top choice (31), followed by written guides (17) and flexible learning options (6). Users who valued ease of use (25) and speed and performance (17) strongly preferred self-paced formats. Although our team initially planned to focus on live-streamed cooking classes, the data shows a clear user preference for more flexible formats like prerecorded videos and written instructions.

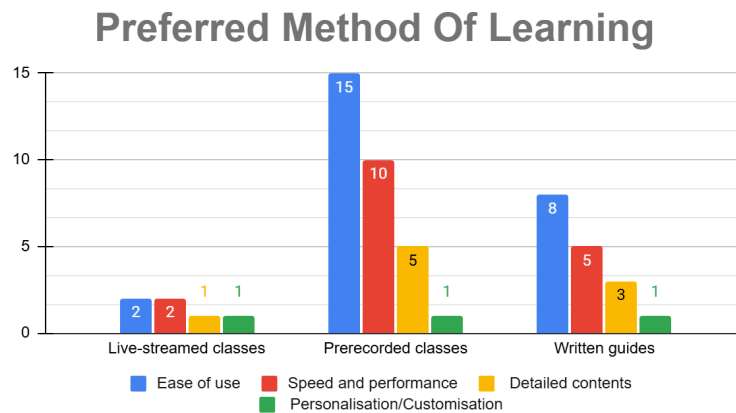

Figure 4: Graph of question 7

Question 8:

Which of the following would be your ideal length for online classes?

In summary, responders want to participate in less than 1 hour of online class, with 10-20 minutes (35.7%) and 20-30 minutes (25%). While more than 30 minutes was less interesting to responders. This data suggests engaging methods to be considered in order to maintain user's focus, but maintaining the content's quality.

Which of the following would be your ideal length for online classes?

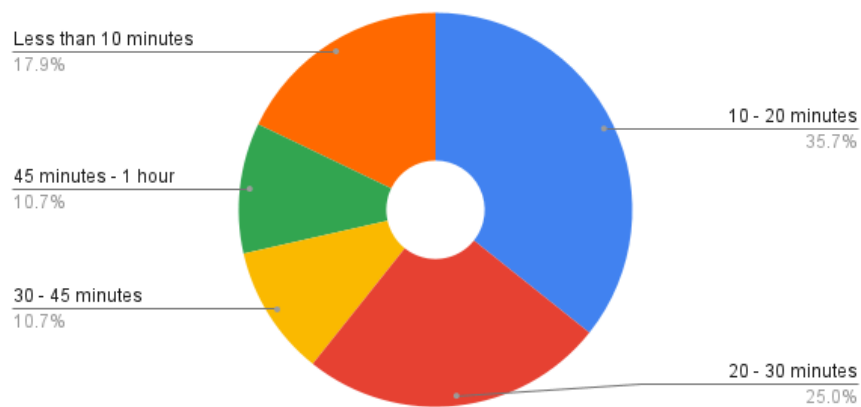

Figure 5: Graph of question 8

Question 9:

How often do you use apps that provide personalised content or recommendations, on average?

Q9 identifies the preference of users on how often that users use personal provided recommendations. This includes 42.9% of 28 people who use these apps more times in a day, 28.6% use it weekly and only 3.6% do not use it. From this, we will consider developing strategies for providing personalised content mechanisms.

How often do you use apps that provide personalised content or recommendations, on average?

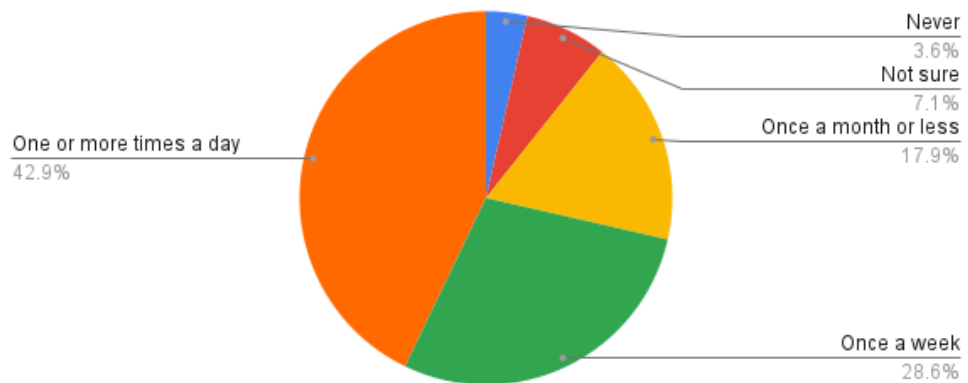

Figure 6: Graph of question 9

Question 10:

How much experience do you have with cooking and/or baking?

Q10 identifies all participants' experience with cooking. The data is as follows: 4 people are very experienced, 9 people are experienced, 14 people have some experience and 1 person has a little experience in cooking. This question's data can provide clear insights of how cooking instruction should be structured and delivered, supporting user's learning.

How much experience do you have with cooking and/or baking?

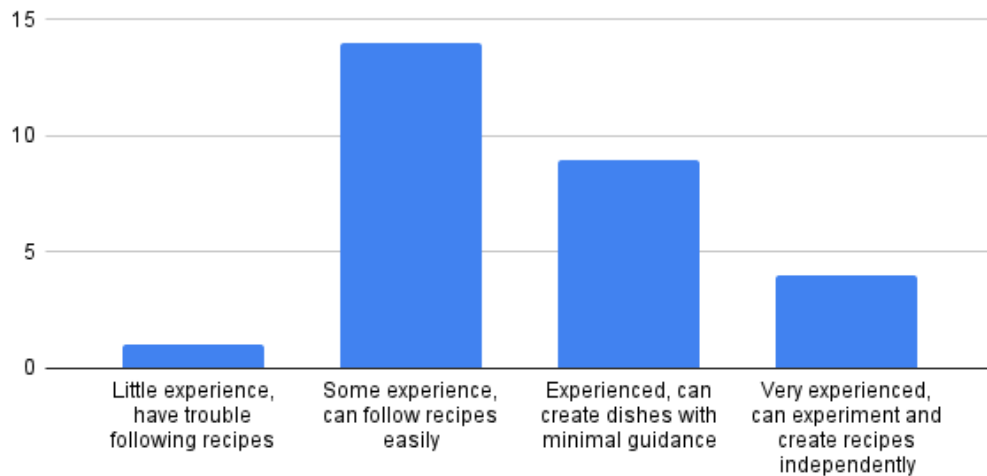

Figure 7: Graph of question 10

Question 11:

How many hours per week are you willing to spend on cooking?

When combining analysing with **Q10**, the data shows that 9 people (32.1%) who spend more than 5 hours cooking have intermediate or higher cooking experience. Most people with some cooking experience or less prefer to spend less hours cooking. In conclusion, this data encourages considering timing aspects to match the user's cooking habits.

Hours of cooking vs cooking experience

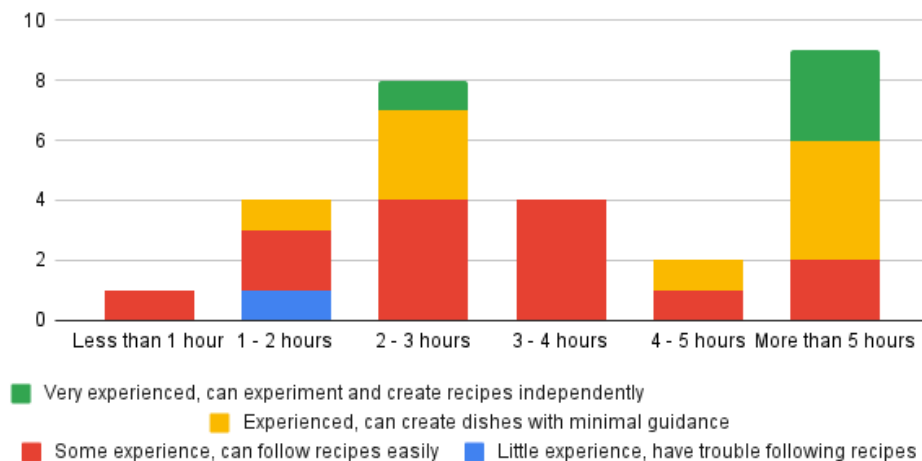

Figure 8: Graph of question 11

Question 12:

What is your main goal when you take cooking classes?

Q12 identified the main goals for taking cooking classes. Nearly all options were highly selected, therefore we should focus our recipes to suit our users' needs, prioritising the most selected options, 'Learn to cook healthy foods' and 'Learn to cook new/interesting dishes' over the others if needed. Notably, cooking special dishes was selected once, and it will not be prioritised.

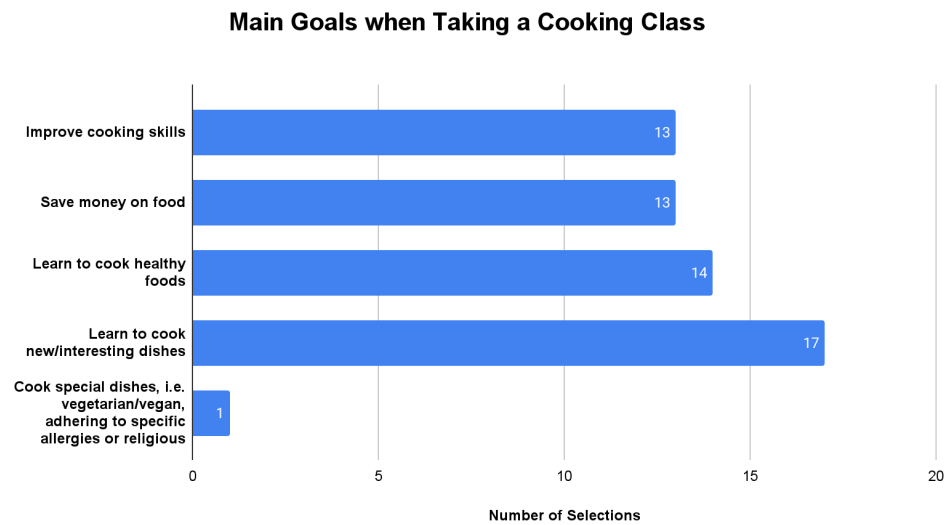

Figure 9: Graph of data from Question 12

Question 13:

If you have any experiences learning new recipes, what challenges do you usually face?

Q13 identified the most common challenges faced when attempting to learn new recipes. The intent was to find common pain points that we could address with our selection of recipes, to make the experience more pleasant. The most common challenges were: Ingredients are difficult to find and Recipes are too time-consuming to complete, which demonstrates the main issues that we should attempt to remedy with our recipes.

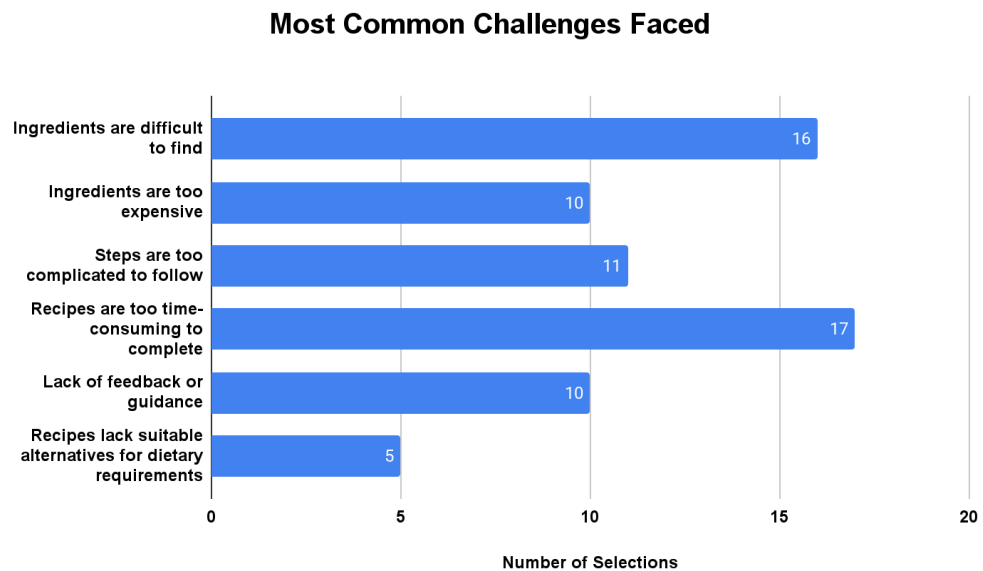

Figure 10: Graph of data from Question 13

Question 14:

What types of cuisine or dishes are you most interested in learning to cook?

Q14 identified the dishes that participants had the most interest in learning to cook. The intent was to determine what types of recipes would best cater to our audience's needs. The most selected options were Asian, Baked goods, and Western, which indicates that we should focus our initial suite of recipes to these cuisine groups.

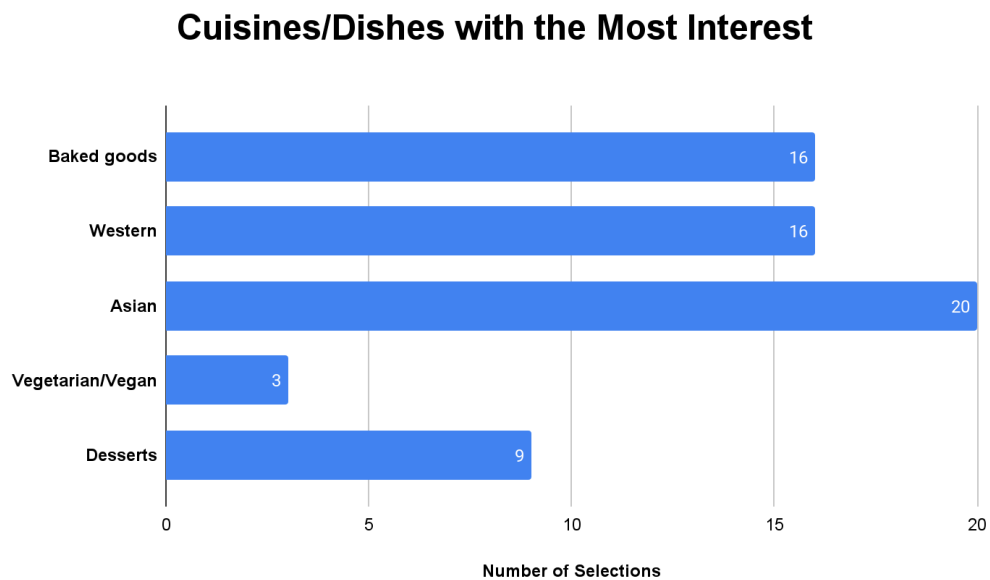

Figure 11: Graph of data from Question 14

Question 15:

Do you have any dietary preferences or restrictions?

Q15 was created to identify any dietary factors that might affect the experience of using the cooking app. Out of 28 participants, only 4 noted dietary needs which were 2 with lactose intolerance and 2 with preferences like low-fat or plant-based diets. Despite the small number, the results show a need to support users with dietary preferences or restrictions.

1.3. Additional research

Due to the low sample size, combined with the relative infrequency of disabilities, we were unable to collect much data on the possible disabilities that our users could face, and thus we deemed this to be a gap in our data. One such group of people that would have been ignored strictly from our data was people with motor disabilities/impairments, these individuals have “limited manual dexterity” and “experience difficulty... with small keypads” and when “keys are not clearly separated” [1], as such we should endeavour to have our touch controls not be overly sensitive and sufficiently large and spaced out to accommodate these users. Another group that would have been neglected would be individuals with hearing impairments, who have issues hearing and interpreting the audio medium in most capacities. As such, they would need “transcripts and captions of audio content” or “clearly distinguishable... foreground audio” [2] to be able to utilise the app.

2. Personas and User Stories

2.1 User Personas

2.1.1 Khang's Personas

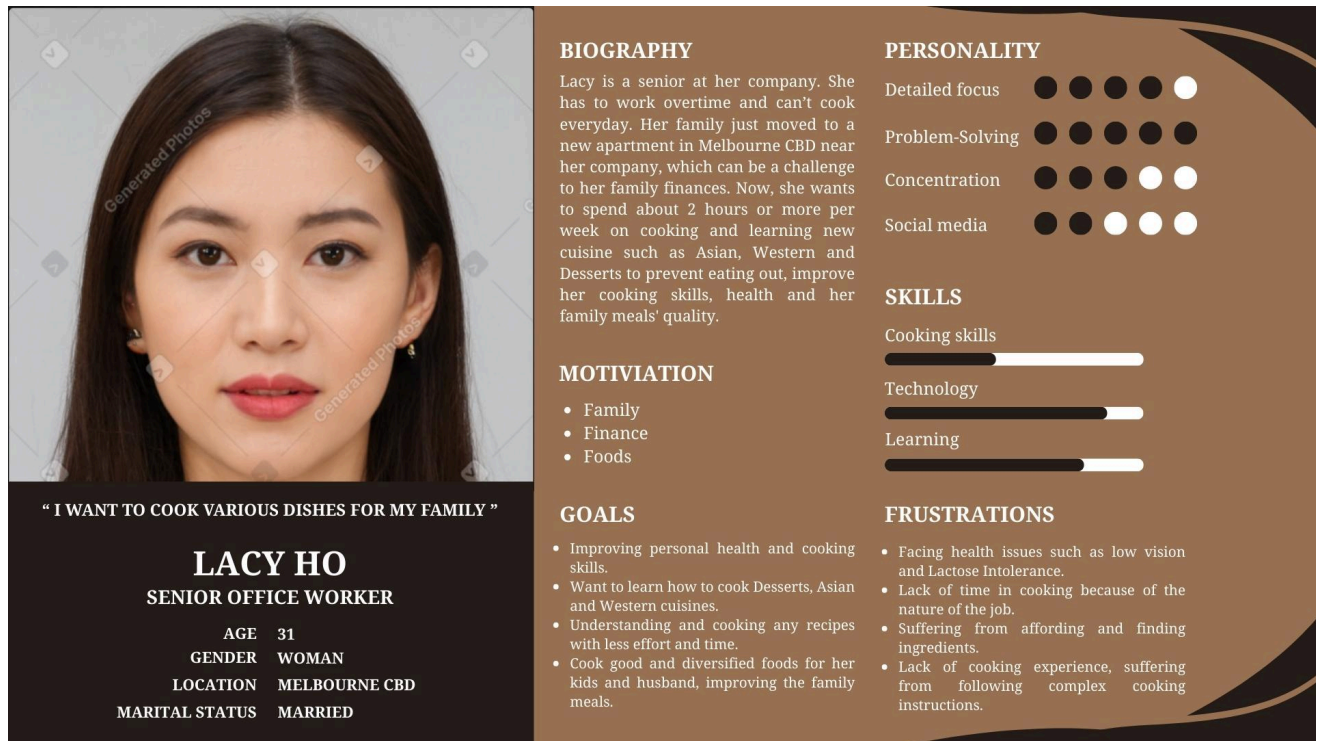

Figure 12: Khang's Personas

Image generated using Generated Photo:

<https://generated.photos/face/neutral-asian-young-adult-female-with-long-brown-hair-and-brown-eyes> , with the following specifications: Neutral asian young-adult female with long brown hair and brown eyes.

2.1.1.1. How the Persona was developed

The general background of the persona such as age, gender and health, family members can be found in the first **5 questions** about participant's demographic information. For instance, the combination of **question 1** and **2**, which highlight a 31 years-old female person, contributes to the background structure. In order to build the biography, all **15 questions** are considered and analysed. For example, **question 3** demonstrates the amount of family members (more than 2) in Lacy's house, which can show the marital status and demonstrate the motivation of

learning cooking. Data from questions about behaviour relating to the cooking aspect should be considered to list out all of the goals and **question 14** is one of the options. It contains Lacy's preference of cuisines that she aims to learn. Finally, to develop the frustrations, **question 13** is considered along with question **4,10,15** because these questions provide the cooking challenges, dietary preference and health issues that can interrupt the new recipe learning process. For the remaining parts such as the motivation, skills, and personality are extracted from all questions' data and are used as a visual of Lacy's background.

2.1.2. Eric's Personas

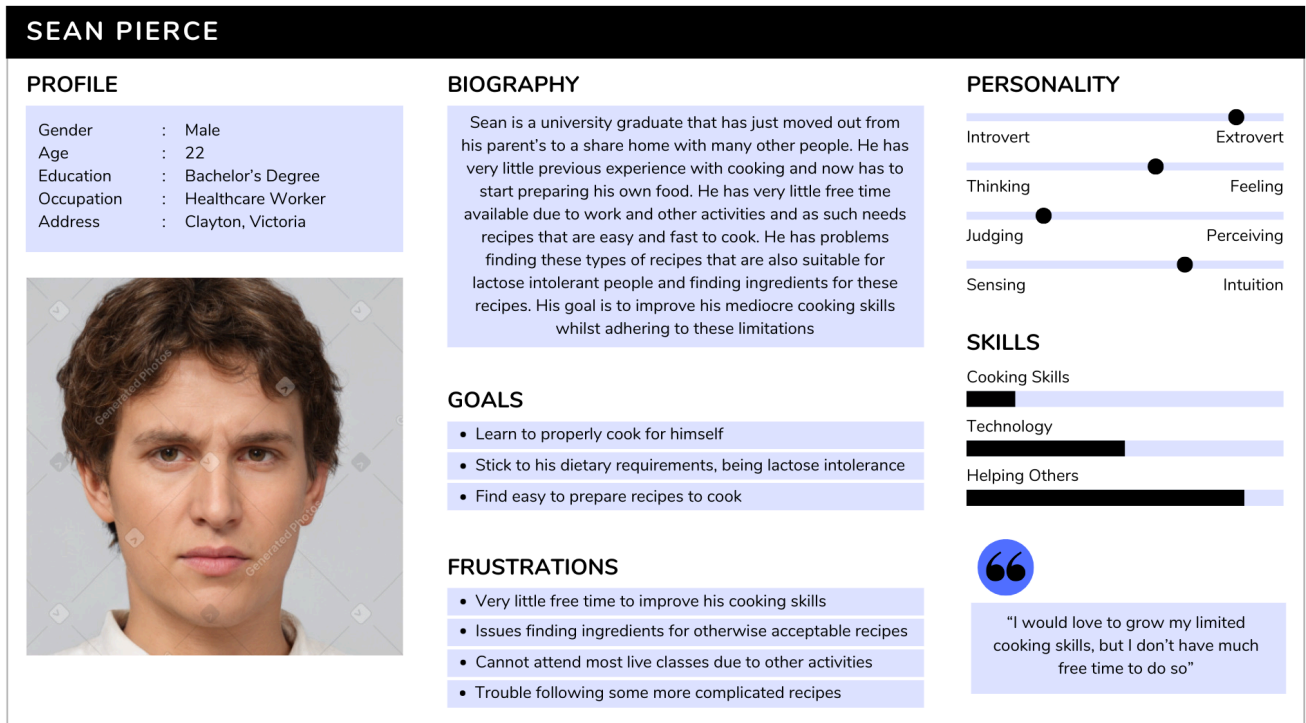

Figure 13: Eric's Personas

Image generated using Generated Photo:

<https://generated.photos/faces/young-adult/white-race/male>, with the following specifications: Male, Young Adult, White

2.1.2.1. How the Persona was developed

Sean was developed using the participant data from Row 11 to best represent an individual who would mostly likely use this application.

Naturally, **question 1** and **2** were used to reveal this persona's personal information of age range and gender, which was used as a basis to build the rest of the persona on.

The main questions used were **question 6** and **10**, which stated that he wanted the application to be Easy to use and that he had Little experience with cooking and had trouble following recipes, this revealed that the application itself had to be intuitive and straightforward and that the recipes that Sean needed had to be simple and easy to understand and follow.

Additionally, **question 7**, **8** and **11** and part of **question 13** were used to build an understanding of Sean's availability and they determined that he had very little

free time to dedicate to cooking and therefore, the recipes he needs must be quick to prepare.

Furthermore, **question 15** was used to identify Sean's dietary needs, being that he is Lactose intolerant and as such can only prepare dairy free recipes, which needed to be accounted for.

2.1.3. Jaeyun's Personas

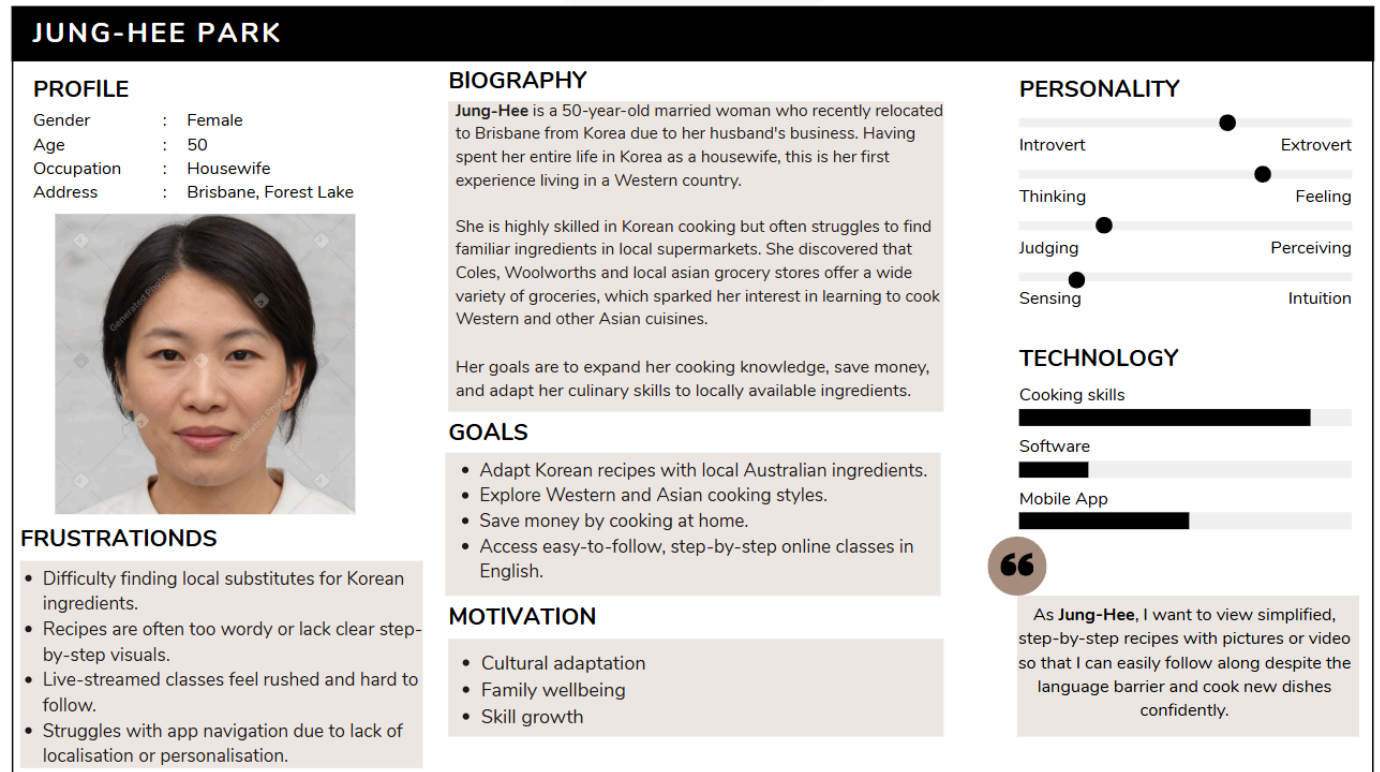

Figure 14: Jaeyun's Personas

Image generated using Generated Photo:

<https://generated.photos/faces/adult/asian-race/female>, with the following specifications: Female, Adult, Asian

2.1.3.1. How the Persona was developed

Jung-Hee's persona was developed by analysing key patterns among respondents aged 35 to 65+, a group that closely aligns with her background.

First, data from **question 1** and **question 10** revealed that participants in this age range consistently identified as experienced or very experienced cooks, often experimenting or following recipes with ease. This reinforced Jung-Hee's identity as a confident home cook.

Second, **question 13** showed that nearly all respondents in this group cited challenges such as "ingredients are difficult to find" and "steps are too

complicated to follow" despite their cooking skills. This reflects Jung-Hee's frustration in adapting Korean dishes using unfamiliar local ingredients.

Third, **question 6** highlighted that 'ease of use' was the most valued trait in mobile apps, a crucial point for Jung-Hee, who is still adapting to digital platforms in a new country and prefers intuitive interfaces.

Finally, **question 7** confirmed a strong preference for prerecorded or written classes over live-streamed sessions, aligning with Jung-Hee's desire for self-paced, flexible learning that suits her lifestyle and comfort level with technology. These insights collectively shaped a persona grounded in real user behavior, needs, and frustrations.

2.1.4. Dohyeong's Personas

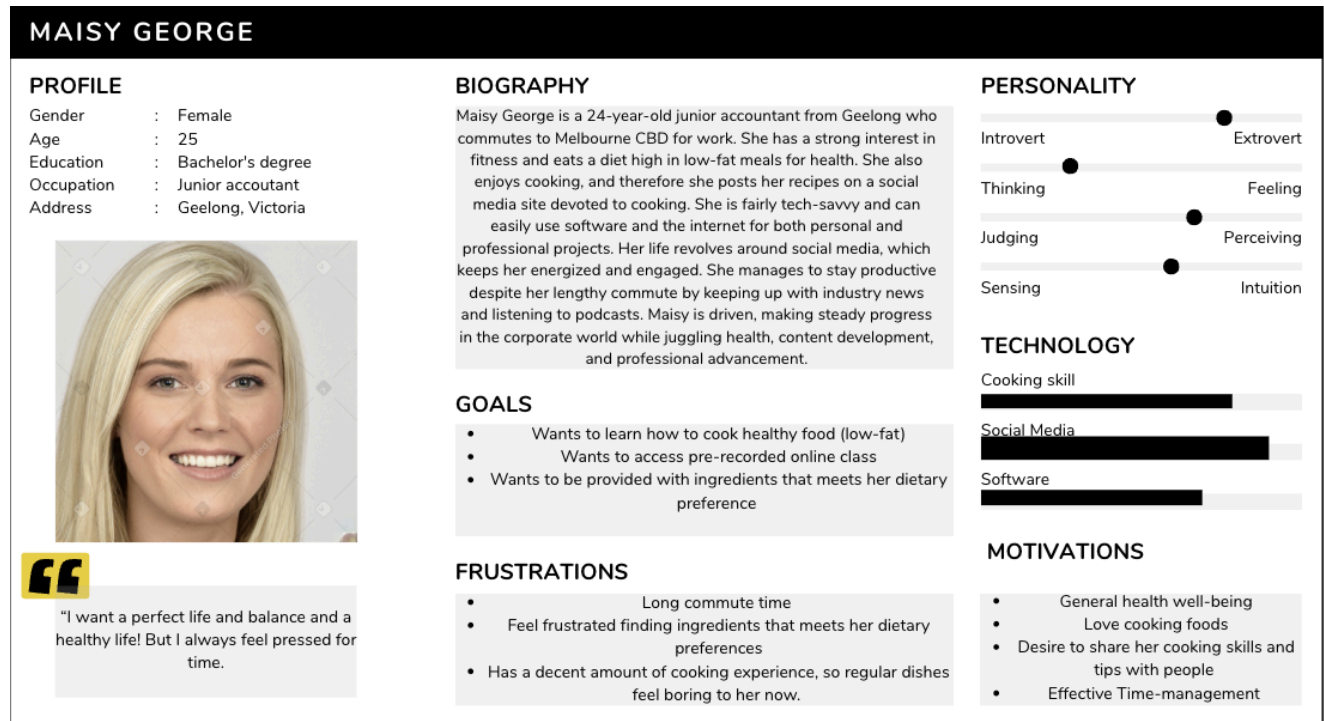

Figure 15: Dohyeong's Personas

Image generated using Generated Photo:

<https://generated.photos/face/joyful-white-young-adult-female-with-long-blond-hair-and-brown-eyes--5dd0882edef8b400084ca01b>

specifications: Female, Young Adult, White

2.1.4.1. How the Persona was developed

Initially, Maisy was developed using the data in accordance with ages amongst participants. She represents females in their 20s, which was the major age group in the selected participants.

Maisy is described as an experienced cook as **question 10** revealed that females in their 20s are generally experienced in cooking or baking. She is also set to have a considerable amount of interest and passion in cooking and food since as **question 12** depicts that they are passionate to improve their cooking skills and try new recipes.

For Maisy's high competence in technology, the output of **question 5** was used to support this setting. Most participants are seen to have multiple online

classes in a week, which implies they are fairly familiar with using softwares and apps as well as social media platforms.

Additionally, **question 13** and **question 15** were used to build a concept that Maisy has a dietary preference such as low-fat, and feel frustrated in finding ingredients that meet her needs.

2.2. User Stories

2.2.1. Khang's User Stories

1. As Lacy, I want to know details of the ingredients such as price and places to buy so that I can consider the price and effort when finding it.

Priority: Must have

Justification: This user story is a must have because it will support Lacy to spend less effort and money on finding and buying the ingredients. With ingredient's information, other users can also choose an appropriate ingredient for their meals.

2. As Lacy, I want to have many options of cuisine and desserts to learn so that I can have multiple types of food options to cook for my family meal.

Priority: Should have

Justification: This user story should be because Lacy can diversify her knowledge in various cuisine types so that she can choose for her family. Meanwhile, other users are able to learn how to prepare the meals they wish to cook.

2.2.2. Eric's User Stories

1. As Sean, I want to be have easy to follow steps for my recipes, so that I can overcome my inexperience with cooking and make meals for myself

Priority: Must have

Justification: This directly addresses Sean's main problem when it comes to cooking, his inexperience. By having recipes steps that are easy to follow, it ensures that Sean will be able to effectively use the application to cook.

2. As Sean, I want to have prerecorded classes, so that I can follow the recipes at my own pace and during my own time

Priority: Should have

Justification: This allows for Sean to watch and learn whenever he is able to and at his own rate, serving the purpose of the application. However, this is not deemed as entirely critical, as Sean might be able to find live classes that suit his time requirements, but having prerecorded classes would make the process much simpler and straightforward.

2.2.3. Jaeyun's User Stories

1. As Jung-Hee, I want to view simplified, step-by-step recipes with pictures or video so that I can easily follow along despite the language barrier and cook new dishes confidently.

Priority: Must Have

Justification: This feature directly addresses Jung-Hee's difficulty with complex English instructions and supports her preferred visual learning style. Without this, she may struggle to use the app effectively. It also aligns with the majority of survey respondents who prefer clear, visual, and self-guided formats over live-streamed content.

2. As Jung-Hee, I want the app to suggest alternative local ingredients for any recipes so that I can adapt Korean recipes using what's available in Australian supermarkets.

Priority: Should Have

Justification: This supports cultural adaptation and ingredient accessibility, improving user satisfaction. It also benefits other users facing ingredient limitations due to location or dietary needs, as seen in multiple survey responses highlighting difficulty in finding ingredients.

2.2.4. Dohyeong's User Stories

1. As Maisy, I want to know how and where I can get ingredients that meet my dietary preference so that I can reduce the preparation time and provide information to people (followers on social media).

Priority: Should have

Justification: This can help her to reduce the time and effort she spends on cooking in the preparation stage and therefore encourage her to be more engaged in cooking. Furthermore, she can use this information to create content for her social media activity. However, while it offers valuable benefits to her, it is not essential for the app's core functionality.

2. As Maisy, I want to have online classes that are short and concise so that I can effectively manage my time spent in cooking.

Priority: Must have

Justification: This feature must be included in the application since the main goal for Maisy to use the app is time management. Offering online classes allows her to watch cooking classes during her commute or in her free time.

2.3. New Functional User Requirements

2.3.1. Khang's User Requirements

1. Allow users to choose a specific cuisine (Asian, Western, Desserts) teaching class to participate in.
2. Allow users to get access to the ingredients's information of any recipes in the assigned online class to get its price and selling location.

2.3.2. Eric's User Requirements

1. Allow users to filter recipes by experience required and difficulty level to best suit their needs
2. Allow users to find classes that are prerecorded so they can follow at their own pace and during their own time

2.3.3. Jaeyun's User Requirements

1. Allow users to access cooking instructions presented in simplified, step-by-step formats with visual or audio support to ensure ease of understanding.
2. Allow users to customise recipes based on available ingredients or dietary needs, supporting a more inclusive and flexible cooking experience.

2.3.4. Dohyeong's User Requirements

1. Allow users to see calorie and macronutrient breakdowns for each recipe and allow them to plan meals for themselves.
2. Allow users to track their overall progress of their cooking course and get provided with regular reminders.
